

Practice Picker: Best Practice Self-Reflection Guide

Core Feature	Question	Yes	No	Reflection: if no, to what extent is this element necessary for student success at this moment?
Student Centered	1. Will it be engaging for MY students?			
	2. Does it give students a choice to show me what they know and can do in different ways?			
	3. Does it give students input on learning outcomes, criteria for success, and/or grading/evaluation?			
Relevance	4. Does it allow my students to apply essential skills (self-direction, task initiation, grit, long-term planning, problem solving, creativity, decision making, goal setting & monitoring, self-reflection, communication & collaboration, etc.)			
	5. Would it allow students to engage with a topic that is important to them?			
Insightful Thinking	6. Will my students have a chance to think deeply and critically or is it simply a comprehension exercise?			
	7. Does it make space for diverse cultural perspectives?			
Universality	8. Would it work across grade levels and content areas (i.e. would it work in kindergarten and 12th grade? Would it work in humanities and STEM?)			
Overall	Is this a best practice or just a good activity?
